

## Windows 10/11 activation after 0xC004F213 error

1. Connect your PC with internet
2. Install ActivateWin10-OPSSetup\*.exe app and execute it automatically

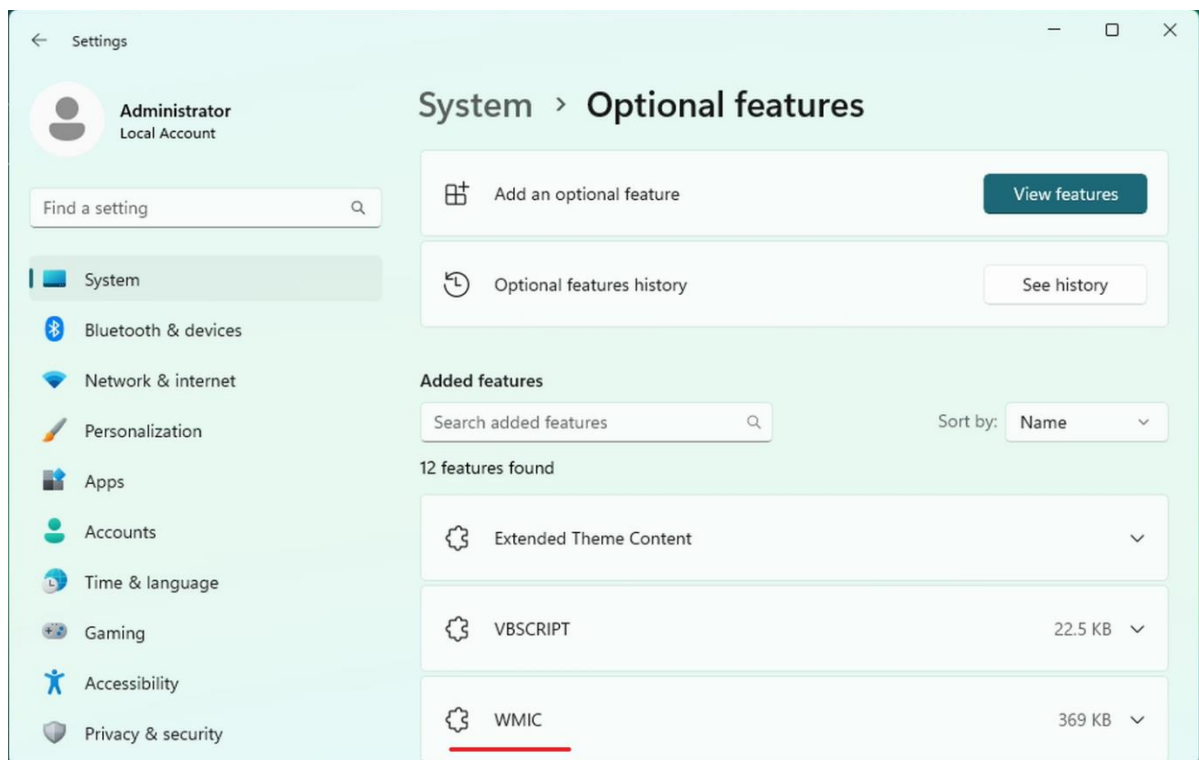

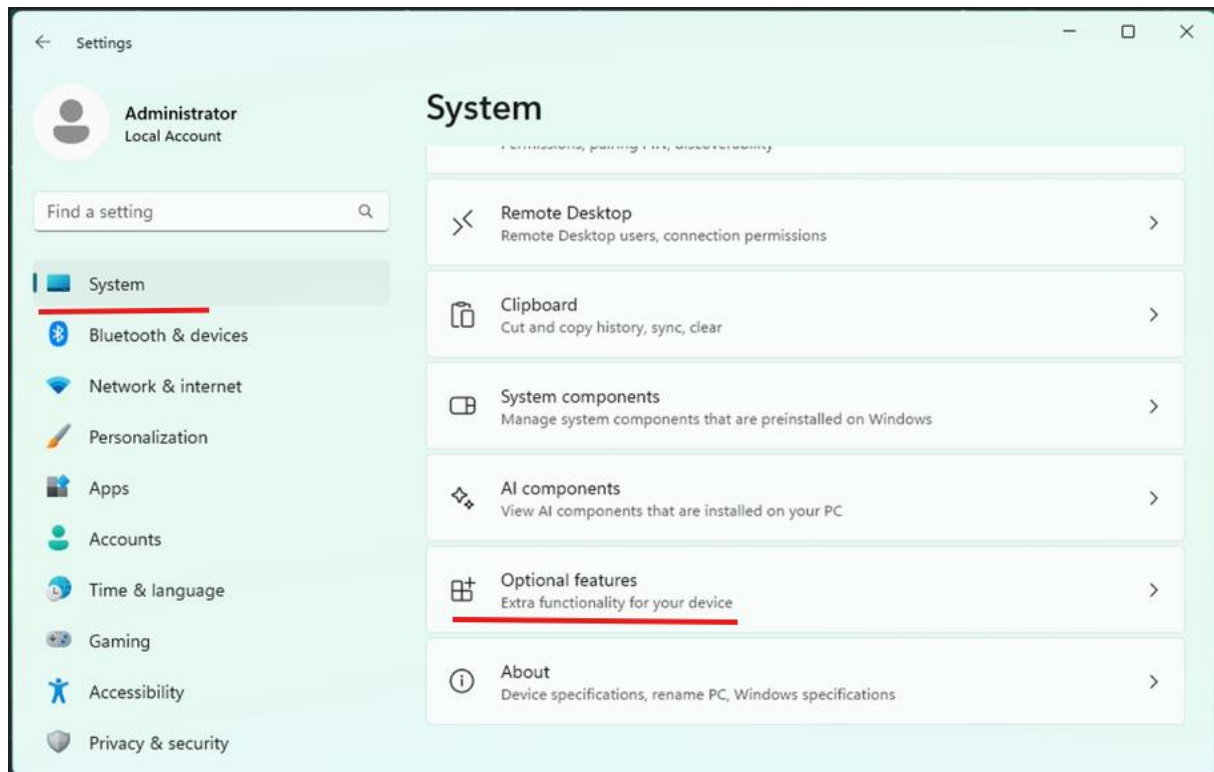

3. wait a moment, till app will communicate “Activation success”  
Depending on server load, it can take up to one minute, you may observe few short windows “blinking” during this time

4. remove ActivateWin10 App from your computer

If activation didn't work please ensure that PC has internet access  
and if WMIC under System optional features is installed,

if WMIC item is missing add it in under “View features” option
